## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 11-15 allowed.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-10 and 16-20 rejected under 35 U.S.C. 103(a) as Guckel (4,180,771) in view of Kuroda et al. (2003/0132392).

Regarding Claims 1-10 and 16-20, Guckel discloses a chemical-sensitive field-effect transistor where in Fig. 1, electrical gate electrode/contact, a sensing layer 22 disposed below the contact and the sensing layer 22 exposed to the outside in the bottom. Furthermore, layers 2 and 10 are located between the sensing layer and the electrical gate contact/electrode. Guckel fails to disclose the perforation/hole/opening structure. However, Kuroda et al. disclose a chemical sensor where in Figs. 1, 2b and 7 and paragraph 10, the required perforations/openings/holes are disclosed.

Regarding Claim 4, there are additional contacts in Fig. 1 of Guckel, namely contacts 14 and 18

Regarding Claim 5 and 18, Guckel's semiconductor device is field effect transistor.

Regarding Claim 7 and 16, Guckel's device is constructed to measure the pH level.

Regarding Claim 8, two layers are disposed between the sensing layer 22 and contacts 14/16/18 in Fig. 1 of Guckel.

Regarding Claim 10, sensing layer in Guckel, Fig. 1 is either a semiconductor layer or an insulating layer.

Regarding Claim 20, the contact 16 is a gate contact.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required perforations/openings/holes in Guckel as taught by Kuroda et al. in order to have a higher accuracy semiconductor device to be used in sensor applications.

### *Conclusion*

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

Art Unit: 2826

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
